RE: MODEL TOBACCO LEGISLATION

CC: WILLIAM W. DAVIS X2366

You asked me to prepare a model bill to regulate smoking in public places and workplaces containing varying levels of restrictions. I've approached this project from several perspectives. First, I took the proposed Polish Act as drafted, and, with a particular focus on the ETS aspects of the legislation (and ignoring the sales to minors and ad ban aspects), I indicated language that should be deleted and language that should be added (the bracketed material) to make the Act more palatable from our perspective.

I also drafted a modified indoor air quality act. This is a greatly condensed version of the model act we submitted to the IAQ Model Law Task Force and adds a section on smoking. Alternative language appears in brackets. Finally, I approached the project from the point of view of simply reworking the offending Article 8 in several ways. I tried to keep the language straightforward, universal and simple in keeping with the spirit of the proposed Polish Act.

Please let me know if you would like me to make any changes to this material or if an alternative approach strikes you as more appropriate.
